/Daniel J. Ryman/ Supervisory Patent Examiner, Art Unit 2466			

Continuation of 11. does NOT place the application in condition for allowance because: the claims are not in condition for allowance and stand rejected under 35 U.S.C. 103. In response to Applicant's argument that McHale modified by Chen fails to disclose " a subscriber information administration server that manages terminations for a plurality of circuits, comprising a circuit administration table for retaining a many-versus-one correspondence between the plurality of circuits and a subscriber...wherein the server updates said circuit administration table to reflect resource allocation of each circuit", Examiner respectfully disagrees. For example, McHale discloses a many-versus-one relationship between the plurality of circuits and a subscriber (in Figure 1 of McHale, a plurality of circuits are disclosed connecting for example, computer, a modem and phone to the communication server) In [0081]-[0082], subscriber table stores information relating to the computer, subscriber, modem and other information associating a data line and a subscriber. Further, [0051]-[0052] of McHale discloses that each subscriber includes one or more components including more than one or more computer. Therefore, McHale discloses the many-to-one correspondence between the plurality of circuits and a subscriber. McHale's disclosure of an activity table and profile table in [0079]-[0080] add more features of describing the correlation between the plurality of circuits and a subscriber.
